

Elevator Safety During COVID-19

Practice safe physical distancing. No more than four people spaced as far apart as possible in each corner.

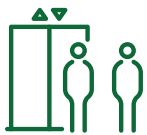

It is recommended that individuals wear a non-medical mask when two metres (6.5 ft) of physical distancing can't be maintained.

Household groups are not required to distance and may use the elevator in groups larger than four if no other individuals are on the elevator at the same time.

If you are able, use the stairs. Check first to see if the staircase has been designated as "up" or "down" only.

While waiting for the elevator, maintain two metres (6.5 ft) between yourself, other passengers and the elevator door.

Avoid touching your face after pressing elevator buttons.

Wash or sanitize your hands after leaving the elevator.
